

Data Cleaning & Preparation - Change Log

DecodeLabs Data Analytics Internship • Project 1

Prepared by:	Singh Aditya Manoj Kumar
Dataset:	Dataset_for_Data_Analytics.xlsx
Records processed:	1,200
GitHub:	github.com/Aditya-ctrl007
LinkedIn:	linkedin.com/in/singhadityamanoj

Summary

The raw dataset was audited against three data-integrity checkpoints: missing values, duplicate records, and inconsistent formatting. All identified issues were resolved and the cleaned dataset passed the verification gate with a 0% error rate on unique identifiers and date formats.

Change Register

Change ID	Description	Impact	Status
CR001	Imputed missing 'CouponCode' values with category 'No Coupon' (blank = customer did not use a coupon, not missing data)	Preserved 309 records that would otherwise have been deleted	Resolved
CR002	Removed exact duplicate rows and duplicate OrderID records	Removed 0 exact duplicate row(s) and 0 duplicate OrderID record(s)	Resolved
CR003	Standardized text casing/whitespace, uppercased ID fields, converted dates to ISO 8601 (YYYY-MM-DD), rounded currency fields to 2 decimal places	Ensured a single consistent format across all 1,200 records	Resolved

Verification Gate Results

Check	Result
Duplicate OrderIDs	0 (Pass)
Incorrectly formatted dates	0 (Pass)
Remaining null values	0 (Pass)

Conclusion: The dataset now meets the Project 2 threshold and is certified as production-ready, gold-standard data.
